

Shreeram Gajanan Parab

■ 8451962848 | ✉ ■ shreeramparab18@gmail.com | ■ Kalyan, Maharashtra

■ Objective

Highly motivated Master of Information Technology (Data Analytics) student with a deep foundation in C/C++, algorithms, and software development. Seeking a Data Processing Developer Technology Intern role to apply proficiency in high-performance computing, parallelization concepts, and performance optimization to data-intensive and Deep Learning computational challenges. Known for a logical approach to problem-solving, strong communication, and effective prioritization skills.

■ Technical Skills

Category	Skills & Tools
Languages	C/C++, Python, SQL, R, MongoDB
Data & Vision	NumPy, OpenCV, Data Analysis, Machine Learning, Power BI, Tableau

■ Relevant Projects & Experience

Collaborated Project – Facial Golden Ratio Detection (Python, Google Colab, Data Visualization)

Developed a collaborative project that determines a person's facial golden ratio using facial length, width, and proportion calculations. Implemented visualization and analysis in Python using Google Colab.

Collaborated Power BI Visualization Projects

Built and maintained a Power BI dashboard visualizing global job trends, including job count and average salary by country in 2024. Currently working on an extended version to display the top 4 highest-paid jobs worldwide, job distribution by education requirement, and additional comparative analytics.

High-Performance Computer Vision & Traffic Analysis

Built a system to analyze real-time traffic using video input, demonstrating experience in Computer Vision. Used OpenCV for vehicle detection and traffic behavior identification. Visualized traffic patterns using NumPy, leveraging linear algebra for matrix and image manipulation. Focused on optimizing the image processing pipeline for future parallelization.

Algorithmic Route Optimization System

Developed an optimized route planning system using real-time data and optimization keys. Applied ML logic for shortest-time path prediction with mapping APIs. Highlighted algorithmic design and C/C++ development skills transferable to core pathfinding logic.

Data Analytics & Business Intelligence Portfolio

Processed job datasets to calculate metrics like job count and average salary using Power BI. Completed Deloitte Job Simulation to analyze factory downtime using Tableau. Executed pay equity analysis using Excel to report unequal pay distribution.

■ Education

Masters of Information Technology (Data Analytics) - Pursuing

University of Mumbai **Bachelor of Science (B.Sc. IT)** (Aug 2021 – May 2025)

Model College of Science and Commerce, Kalyan

CGPA: 9.05

■ Certifications & Trainings

- C++ Programming Training: Focused on object-oriented principles (classes, inheritance, polymorphism).
- C Programming Training: Emphasis on procedural logic, pointers, and memory management.
- Python Programming Training: Covered core concepts, data structures, and OOP.
- Data Analytics Job Simulation (Deloitte/Forage): Completed tasks in Data Analysis and Forensic Technology.
- Research Methodology Course (Udemy): Training in research techniques and documentation.

■ Strengths & Focus Areas

- Logical Problem Solving: Logical approach to problem-solving, effective communication, and prioritization skills for complex development tasks.
- Algorithms & Development: Fluency in C/C++, combined with hands-on training and focus on algorithms.
- Research & Organization: Strong research and documentation skills, demonstrating organization and attention to detail.
